Approval Flow Plus
by PKF Digital

Many businesses have users who are required to approve transactions. These are often executives who are on the go and not always in front of a computer, or do not have access to NetSuite.

PKF Digital has developed a solution that provides companies with the ability to approve transactions directly from their email, without needing to login to NetSuite.

How it Works

1 By utilising this solution, any transaction requiring approval in NetSuite can have an email automatically sent to the next approver to approve the transaction.

2 This email allows the user to click on a button to view details of the transaction, without the need to log in to NetSuite.

3 The user can then simply click to approve or reject the transaction. Rejection notes will be recorded against the transaction in NetSuite.

**Fast & simple 'on the go' transaction approvals,
made easy with PKF Digital.**
