

# Xero to NetSuite

by PKF Digital

As businesses like yours outgrow their Xero accounting system, you typically begin a search for an alternative solution. This often involves not just a replacement accounting system but a full system that includes inventory, time recording, an integrated Sales, Service and Marketing system, and other functions typical of an Enterprise Resource Planning (ERP) system.

**NetSuite is one of the most popular systems that Xero customers migrate to, given it is designed in the cloud for medium-sized growth companies.**  
However, making this change is not straightforward.

## Migrating from Xero to NetSuite

**Typical problems companies have to overcome when migrating to NetSuite are:**

- ▶ The time it takes to migrate data from Xero into NetSuite, as well as the thought of insecure data in Excel files being emailed to and fro
- ▶ How to retain historical transactions & details from Xero into NetSuite
- ▶ The daunting prospect of migrating multiple Xero instances to NetSuite in one "big bang" for multiple Xero systems

In addition to this you may just want to have a hybrid of systems, retaining Xero for smaller entities and NetSuite for larger operations whilst consolidating all group companies in minutes, not days and weeks, to see a group P&L and Balance Sheet.

### XERO INTEGRATION PLUS

**Our Xero Integration Plus solution solves these problems for you and delivers a new NetSuite system the way you want, in a flexible, configurable way.**

**You can migrate all your Xero instances or stagger the implementation over time.**
