

# Billing Automation Plus

by PKF Digital

NetSuite's Advanced Billing helps finance departments to automate billing procedures and removes manual work often involved in billing clients, decreases errors and saves the business time and money. Unfortunately, some of the game-changing features in this industry-leading billing solution, such as the SuiteBilling Module is not made available to NetSuite customers in Australia.

**Thanks to PKF Digital's Billing Automation Plus for NetSuite, one of the newest products from PKF Digital, we can now provide these advanced features to Australian customers.**

## BILLING AUTOMATION PLUS HIGHLIGHTS:

Together with the basic Netsuite charged-based billing service, Billing Automation Plus adds 3 more project billing rule types: Subscription, Usage and Percent Complete

- ▶ **Subscription-based**  
You can select a monthly, prorate, perpetual schedule, or even task trigger plan.
- ▶ **Usage-based**  
This solution charges based on a quantity multiplied to rate.
- ▶ **Percent Complete**  
Payments based on a percentage of completed tasks or milestones.

**Billing Automation Plus** is a simplified configuration bundle that syncs flawlessly with Netsuite's Project Billing Module, and is the only 3rd party solution built and supported by an Australian company.
